

Equipment Housing for Downhole Measurements

Abstract

The present invention is directed to a housing for equipment that may be employed in obtaining downhole measurement data. In one illustrative embodiment, the apparatus comprises a first component adapted to be positioned in a subterranean hole, a second component adapted to be positioned in the subterranean hole, and a detachable housing, at least a portion of which is clamped between the first and second components, the housing having at least one cavity formed therein and at least one device positioned within the at least one cavity.
